Conclusion:

In this prelim exam we used to create an inventory file and ansible i used to manage to install the python3, pip and java open jdk but i don't know if my work is correct. I'm thinking if i'm going to install python3, pip and java open jdk inside the ansible. There's an error in creating the playbook. I also tried to put MOTD inside the config.yml but the output is warning: no inventory was parsed, only implicit local host is available. So I didn't make the activity right.
